Digital Signal Processing
ECG Filtering Assignment

2785209M & 2664680S

1 Plotting the ECG Signal

1.1 Reading the File

1.2 Plotting the Signal

1.3 Structure of PQRST Complex

1.4 Sources of Noise in the ECG

2 Making the FIR Filter

2.1 calculating the number of coefficients and Stopband Attenuation

2.2 Performing IFFT on the ideal frequency response in the time domain

2.3 The Kaiser Window
